### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

4. The prior Art of record and in particular Szymanski teaches:
  - A method to a communications system comprising:
  - a set of packet data;
  - assigning a packet sequence identifier value to said packet data

- computing the CRC bits on said data;
- associating said computed CRC bits and said connection identifier value with said data;
- transmitting said data, said computed CRC bits and said connection identifier value to said communication system;
- processing said transmitted data, computer CRC bits and packet sequence identifier value in said communication system to pass on said packet data, said computed CRC bits and said Connection identifier value to a corresponding receiver;
- extracting data, CRC bits and connection identifier value; computing CRC bits on said extracted data ; and
- comparing said extracted CRC bits and said CRC bits computed on said extracted data.
- wherein a transmission error is detected if said extracted CRC bits and said CRC bits computed on said extracted data are different

However, the prior art do not teach, suggest, or otherwise render obvious:

- A method to a communications system comprising: a plurality of emitters , receivers and channels , with a set of data, each data comprising at least one-emitter and receiver identifiers. said method comprising the steps of:
- for each data in said set of data:

- assigning a connection identifier value to said data according to the emitter and receiver identifiers of said data;
- computing the CRC bits on said data;
- associating said computed CRC bits and said connection identifier value with said data;
- transmitting said data, said computed CRC bits and said connection identifier value to said communication system;
- processing said transmitted data, computer CRC bits and connection identifier value in said communication system to pass on said data, said computed CRC bits and said Connection identifier value to a corresponding receiver;
- extracting data, CRC bits and connection identifier value; computing CRC bits on said extracted data ; and
- comparing said extracted GRC bits and said CRC bits computed on said extracted data.
- wherein a transmission error is detected if said extracted CRC bits and said CRC bits computed on said extracted data are different

As structured in claim 1.

5. Claims 2,6-8 and 10 depend from claims 1.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
